# LOG LOADING

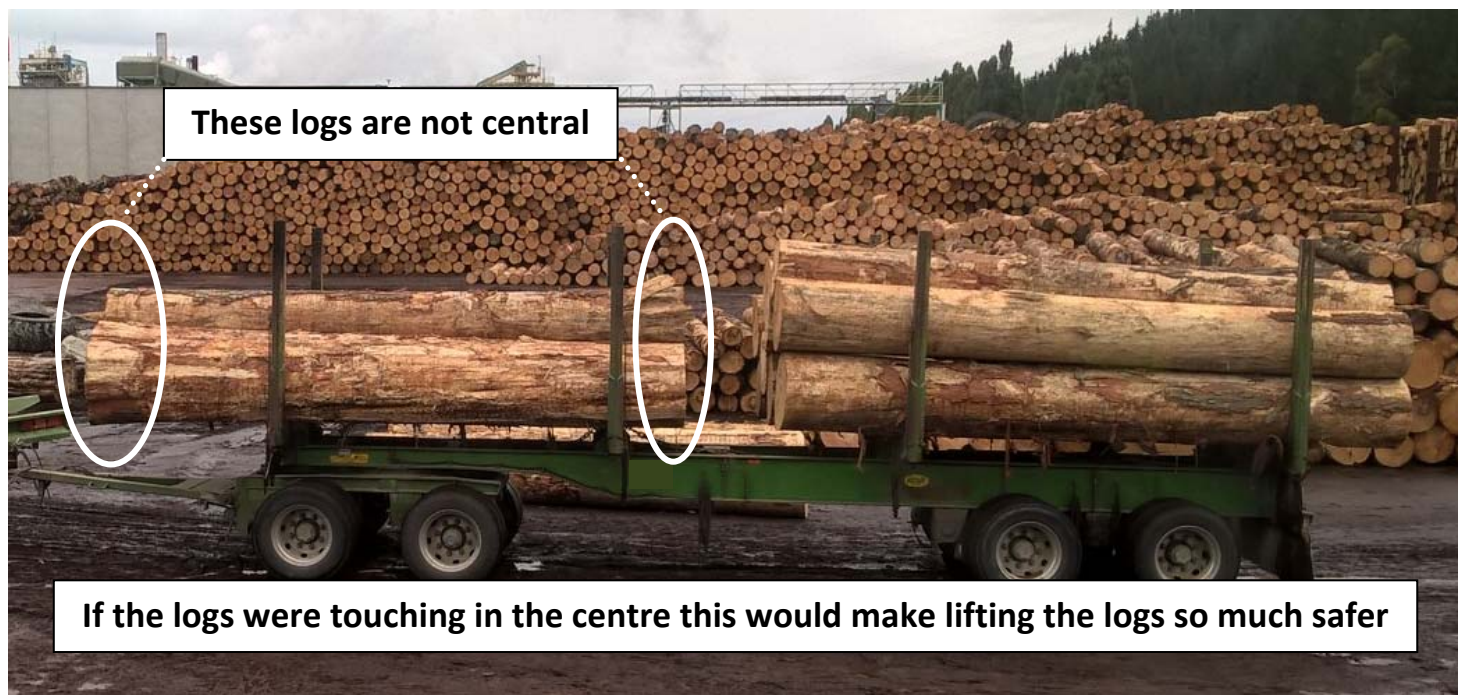

## YOUR ATTENTION IS REQUIRED!!!

Let's try and make everyone's lives a lot safer and easier.

**Log Loaders**, you need to take extra care when loading logs onto trucks and make sure they are centred and crowned properly. Truck drivers have the right to speak up if they are unhappy with how their units have been loaded.

The photo's to the right are showing lop sided loads, which are very unsafe to unload and several property damage incidents have occurred as a result. Logs are slippery enough through mechanised harvesting, the rain and sap, so we don't need any extra challenges to deal with.

Let's work together!!! If it doesn't look right, it probably isn't.

These logs are not central

If the logs were touching in the centre this would make lifting the logs so much safer
